PHOTOELECTRIC OBSERVATIONS OF SOUTHERN CEPHEIDS IN 1996

L. N. BERDNIKOV^{1,2} and D. G. TURNER³

¹ Sternberg Astronomical Institute, Universitetskij pr. 13, Moscow, 119899, Russia

² Visiting astronomer, Cerro Tololo Inter-American Observatory, National Optical Astronomy Observatories, operated by the Association of Universities for Research in Astronomy, under contract with the National Science Foundation

³ Saint Mary's University, Halifax, Nova Scotia, B3H 3C3, Canada

(Received March 7, 1997)

In September–November 1996, 2902 photoelectric BVI_c brightness measurements were made for 123 Cepheids using the CTIO 1-m reflector. Tables of observations, V light curves, and $B - V$ and $V - I_c$ colour curves are presented.

KEY WORDS Cepheids, photoelectric photometry

1 INTRODUCTION

Our experience in studying the pulsational period stability for a number of northern hemisphere Cepheids has shown that only regular photoelectric observations of these stars (Berdnikov, 1986, 1987, 1992a–1992f, 1993; Berdnikov and Turner, 1995a, 1995b; Berdnikov and Vozyakova, 1995; Berdnikov *et al.*, 1997b) make it possible to reveal and study their small period variations (Berdnikov, 1994; Berdnikov and Pastukhova, 1994a, 1994b, 1995; Berdnikov, *et al.*, 1997a). In 1994, in addition to the monitoring of northern hemisphere Cepheids, we began the same programme for a number of southern hemisphere Cepheids. A continuation of this programme is the first goal of the present paper.

Another goal of this paper is to obtain photoelectric light curves for 56 southern hemisphere Cepheids that have not been observed in detail previously or for which light curves are incomplete.

2 OBSERVATIONS

The photoelectric observations were performed in September–November, 1996 (JD 2 450 348–94) with the 1-m reflector of the Cerro Tololo Inter-American Observa-

tory (CTIO), equipped with the ASCAP pulse-counting photoelectric photometer. Cooled unit 53 with an RCA 31034 photomultiplier and BVI_c filters from filter set 3 of the Kron-Cousins photometric system (Cousins, 1976) were employed.

Observing techniques are described in our previous paper (Berdnikov *et al.*, 1997b). Landolt's (1983) photometric standards from the equatorial areas SA 94 (stars Nos. 305, 308, and 342), SA 110 (stars Nos. 340, 353, and 471) and SA 114 (stars Nos. 172, 176, and 272) were used. Observational errors of the Cepheids are close to $0.^m01$ in all bands.

We have obtained a total of 2902 measurements for 123 Cepheids, which are summarized in Table 1 and plotted in Figures 1–14. The first column of Table 1 gives the heliocentric times of the observations; the third through fifth columns give the V magnitudes and the $B - V$ and $V - I_c$ colours. The phases of observations, given in the second column of the table and used to construct the light curves in Figures 1–14, were calculated with the elements from Table 2.

For 23 Cepheids (CF Car, CQ Car, FK Car, FM Car, HS Car, HW Car, IK Car, IM Car, IP Car, IZ Cen, LV Cen, BQ CrA, V449 CrA, DF Ori, V336 Ori, DV Ser, RX Tuc, SV Tuc, BH Vel, BQ Vel, CP Vel, DK Vel and FN Vel) photoelectric observations were obtained for the first time. In addition, observations allowed us as well to refine the light curves (mainly in the I band) for 33 Cepheids: VX Cap, V Car, UW Car, UY Car, CN Car, ER Car, GS Car, GX Car, IU Cen, V381 Cen, V659 Cen, V737 Cen, AV Cir, BP Cir, AL CrA, BE CrA, HQ CrA, KQ CrA, V347 CrA, S Mus, AA Nor, GU Nor, AP Pup, CO Pup, V636 Sco, ST Vel, SX Vel, AE Vel, AM Vel, CO Vel, CS Vel, CX Vel and DP Vel.

The large scatter of data points in the light curves for Y Car, GZ Car, UZ Cen, BK Cen, VX Pup, EW Sct, V367 Sct, BQ Ser, U TrA, AP Vel and AX Vel can be explained by the bimodality of these Cepheids.

Acknowledgements

The authors acknowledge the partial support for this work by the Russian Foundation for Fundamental Research (project Nos. 1995-02-05276 and 1994-02-04347) and the Natural Sciences and Engineering Research Council of Canada. We are grateful to the Director of the Cerro Tololo Inter-American Observatory for allocating a large amount of observing time.
